Course Learning Outcomes

Knowledge:

- Articulate a knowledge of theories, regulations, trends and practices involved in aviation law.

Application:

- Apply aviation law in a simulated court proceeding.

Integration:

- Integrate best practices in actual flight events.

Human Dimension:

- Identifying their own and others' individual personality traits to help understand how personality affects one's interactions with others in the midst of dynamic, safety-critical situations.

Caring - Civic Learning:

- Recognize how human errors, miscommunications, and responses contribute to aircraft accidents.
- Grasp an understanding of how their own actions and communication skills directly affect the safe outcome of any given flight and any resulting regulator proceedings.

Learning How to Learn:

- Recognize changes in aviation regulations and laws and incorporate those changes in their professional careers.
- Incorporate their own positive study habits as they prepare for recurrent training requirements of the FAA.
- Recognize the importance of self-study in keeping current in their profession.
